The selected protective gloves have to satisfy the specifications of EU Directive 89/689/EEC and the standard EN 374 derived from it.

The choice of an appropriate glove does not only depend on its material but also on other quality features and is different from one producer to the other.

As the product is a preparation of several substances, the durability of the glove materials cannot be calculated in advance and has to be tested before use.

The exact break through time can be obtained from the protective glove producer and this has to be observed. E.g. Protective glove model Dermatril by company KCL – nitrile rubber protective glove – thickness: > 0.11mm – Penetration time: >120min according to EN374 or equal.

Skin that comes into contact with the product should be treated with protective cream. After a contact, it should under no circumstances be used.

Observe manufacturer's recommendations.
