

Sto Specification New Zealand

StoCalce Colors and Mixing Ratios

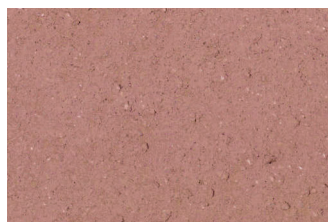

StoCalce Activ finishing plasters are naturally tinted with a selected range of StoCalce Color tints on site by the Sto Contractor. The colour chart below denotes the name and formula (eg. 125ml / 25kg) that is used to make these colours, however the intensity can be altered by adjusting the amount of tint used.

StoCalce Colors can change from project to project, because of the organic nature of hand application, environmental conditions and lighting influences. Given on site variances it is recommended that a dry sample is approved before proceeding.

STANDARD STOCALCE COLOR RANGE

Pumice
125ml / 25kg

Pino
250ml / 25kg
