

Rejuvenate Your Facade

Conventional cement-based plasters often become worn and exhibit fractures over time due to thermal expansion, weathering and building movement.

When it comes to rejuvenating and protecting your building's exterior, StoArmat Refurbishment Render Systems offer an advanced, highly durable and attractive solution, for years to come.

Ideal for:

- Residential Homes
- Apartments & Body Corporates
- Commercial Buildings & Facilities Management
- Heritage Projects & Building Specialists

StoArmat Refurbishment Render System

A 3.5 mm German-engineered plaster system, designed to rejuvenate, enhance and protect your building exterior, long-term.

3.5 mm of real waterproofing

StoArmat’s 3.5 mm thick waterproof barrier is up to 20 times thicker than conventional systems. Unlike thin, paint-on or texture-only coatings, our cement-free, polymer-bound render systems offer exceptional durability and flexibility, ensuring long-lasting performance.

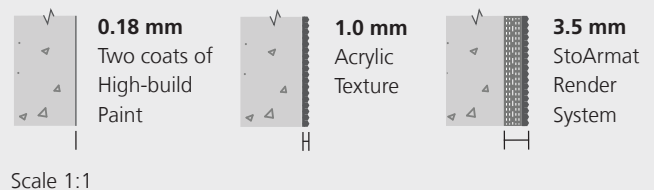

10x tougher than standard plaster

Cement-based plasters are prone to impact, cracking, and damage, leading to potential water penetration and costly repairs. StoArmat Render Systems provide 10x greater impact and crack resistance compared to cement-based plasters.

10x the flexibility of standard plaster

New Zealand buildings endure some of the world’s toughest conditions, intense UV, thermal stress, structural movement, and seismic forces. StoArmat Render Systems are designed to move with your building, delivering superior flexibility and crack resistance.

Restores visual integrity

Refresh and transform aging surfaces with Sto’s range of modern textures and colour selections. Stolit coloured render finishes are cement-free, polymer-bound, and reinforced with high-quality marble grains. They deliver outstanding durability with their tinted composition ensuring any scratches and scuffs remain virtually invisible.

12-year recoat cycles

Repainting is expensive, disruptive, and time-consuming. Most facades require recoating every 7–8 years to maintain their look and integrity. StoColor Facade Paints are engineered for long-lasting durability, extending recoat cycles up to 12 years, saving you time and money.

BRANZ appraised. Tried & trusted for over 30 years on homes and high-rises alike.

From plans to completion. Sto is with you every step of the way.

Backed by a 15-Year StoWarranty. Product, Workmanship & Maintenance.

Stolit Finishing Renders

Stolit K Range - Stippled coloured self-gauging float finishing render in various granule sizes; 1.0 mm, 1.5 mm, 2.0 mm, 3.0 mm.

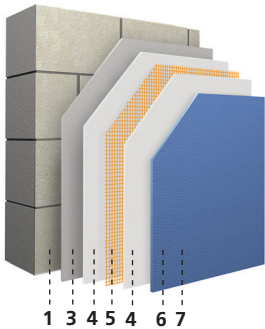

Stolit Milano - A coloured smooth render finish that can be styled to duplicate the natural surface look of precast concrete panel.

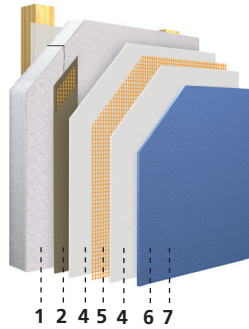

Stolit MP Range - Coloured fine finishing render that can be floated, sponged or applied as a light adobe render.

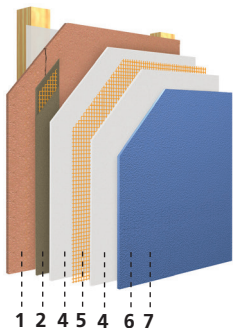

Existing Masonry / Block

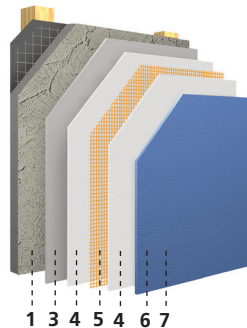

EPS / Polystyrene Cladding

Fibre Cement Sheet

Traditional Stucco

StoArmat Refurbishment Render System

1. Existing Substrate

2. Crack Treatment: StoFlexyl / StoGold Fill

A flexible filler and moisture barrier, to reinforce and seal joints and cracks.

Plus: Sto Jointing Mesh (as required)

Fibreglass reinforcement mesh for crack resistance.

3. Basecoat: StoLevell Novo

Lightweight mineral plaster with good build properties to level the walls.

4. Reinforcement Render: StoArmat Classic Plus

A polymer-bound, cement-free, flexible, high-impact render, offering 10 times the fracture resistance of conventional cement-based plasters.

5. Mesh: Sto Fibreglass Mesh

Meets the highest requirements for crack, stress and alkalinity resistance.

6. Coloured Finishing Renders: Stolit Renders

Polymer-bound, highly weatherproof, strong, hard-wearing, impact-resistant, pre-coloured finishing renders.

7. Coating: StoColor

StoColor coatings based on IQ Net Technology for functional facades or a StoClear sealer.

All installations are carried out by a Sto Registered Contractor. For a project specification contact us.

*Where the benefits of renovation is required, but design constraints or budget considerations are a factor, a StoColor Coating System may be ideal.

*Where structural integrity work is required a reclad may be necessary.

Building with conscience.
